

Abstract**Wall Mounting for a Shower Head**

A wall mounting for a shower is mounted such as to pivot about a horizontal axis at the end thereof against the wall (1). The arm (5) has a fork at the separation from the fixing end. A clamp holder is provided in the region of the front end thereof in which a shower head (8) can be introduced. The fixing between the shower head (8) and the mounting is made by a friction connection, whereby the housing of the shower head is embodied such that it cannot be recognized from the form thereof that said housing serves for fixing.
